

CSP16205-1 POP2016-05

Yellow-eyed penguin diet and indirect effects on prey composition

Collation of biological information

Yellow-eyed penguin / hoiho

Megadyptes antipodes

Distribution

Distribution

Almost all species
information originates
from mainland

Foraging behaviour

7.42 km

Data SIO, NOAA, U.S. Navy, NGA, GEBCO

Google earth

Foraging behaviour

275 of 300 dives went to seafloor

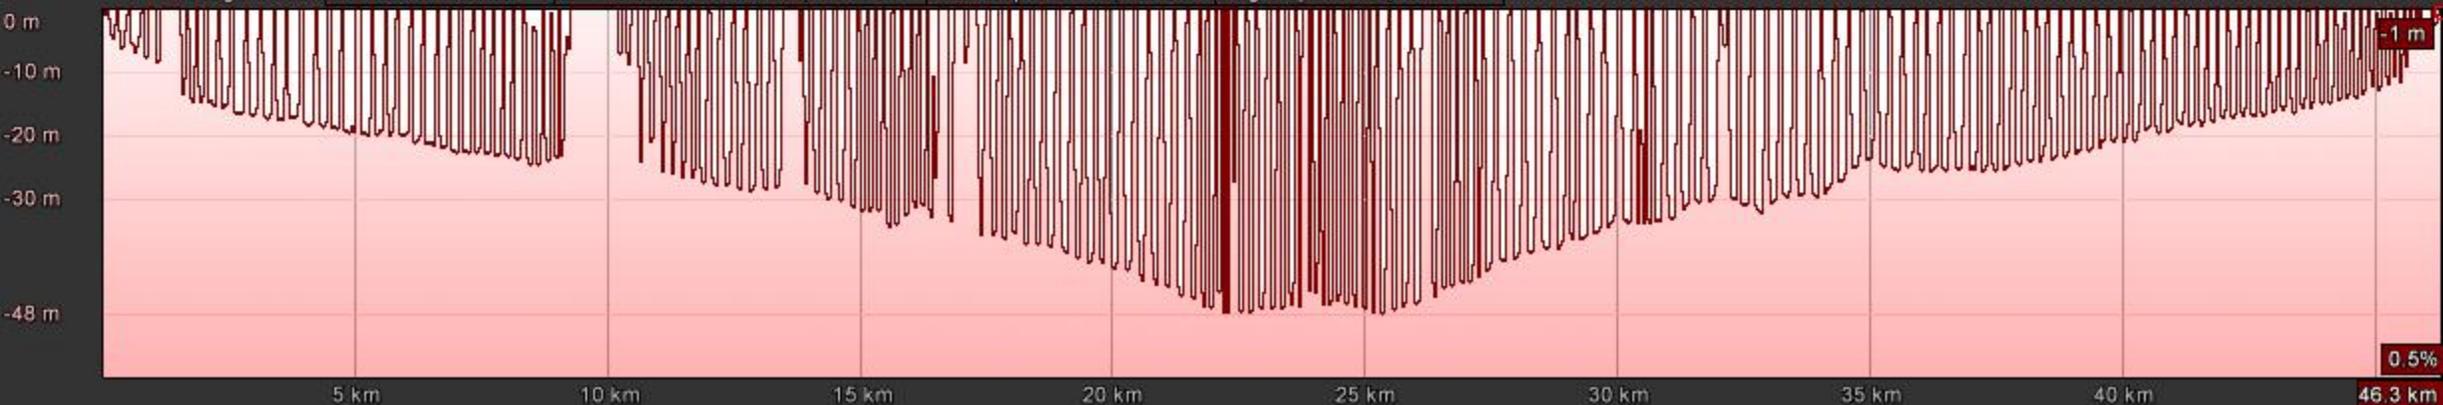

Total trip duration: **11.6 hrs**
Time spent at seafloor: **5.5 hrs**

Stewart Is/Rakiura, Whenua Hou (2007)

Dominant prey species

Red cod

Pseudophycis bacchus

Dominant prey species

Blue cod

Parapercis colias

Dominant prey species

Opalfish

Hemerocoetes monoptygius

Other prey

Slender sprat

Sprattus antipodum

Other prey

Arrow squid

Nototodarus sloani

Other prey

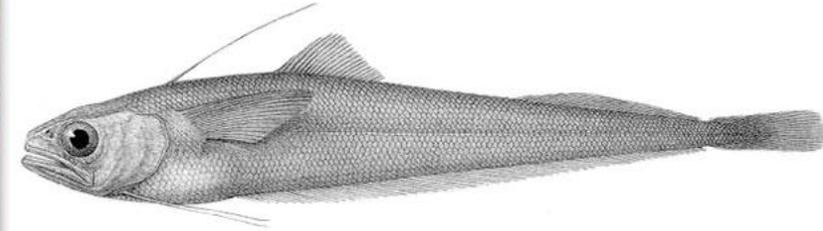

Silverside

Argentina elongata

Tarakihi

Nemadactylus macropterus

Ahuru

Auchenoceros punctatus

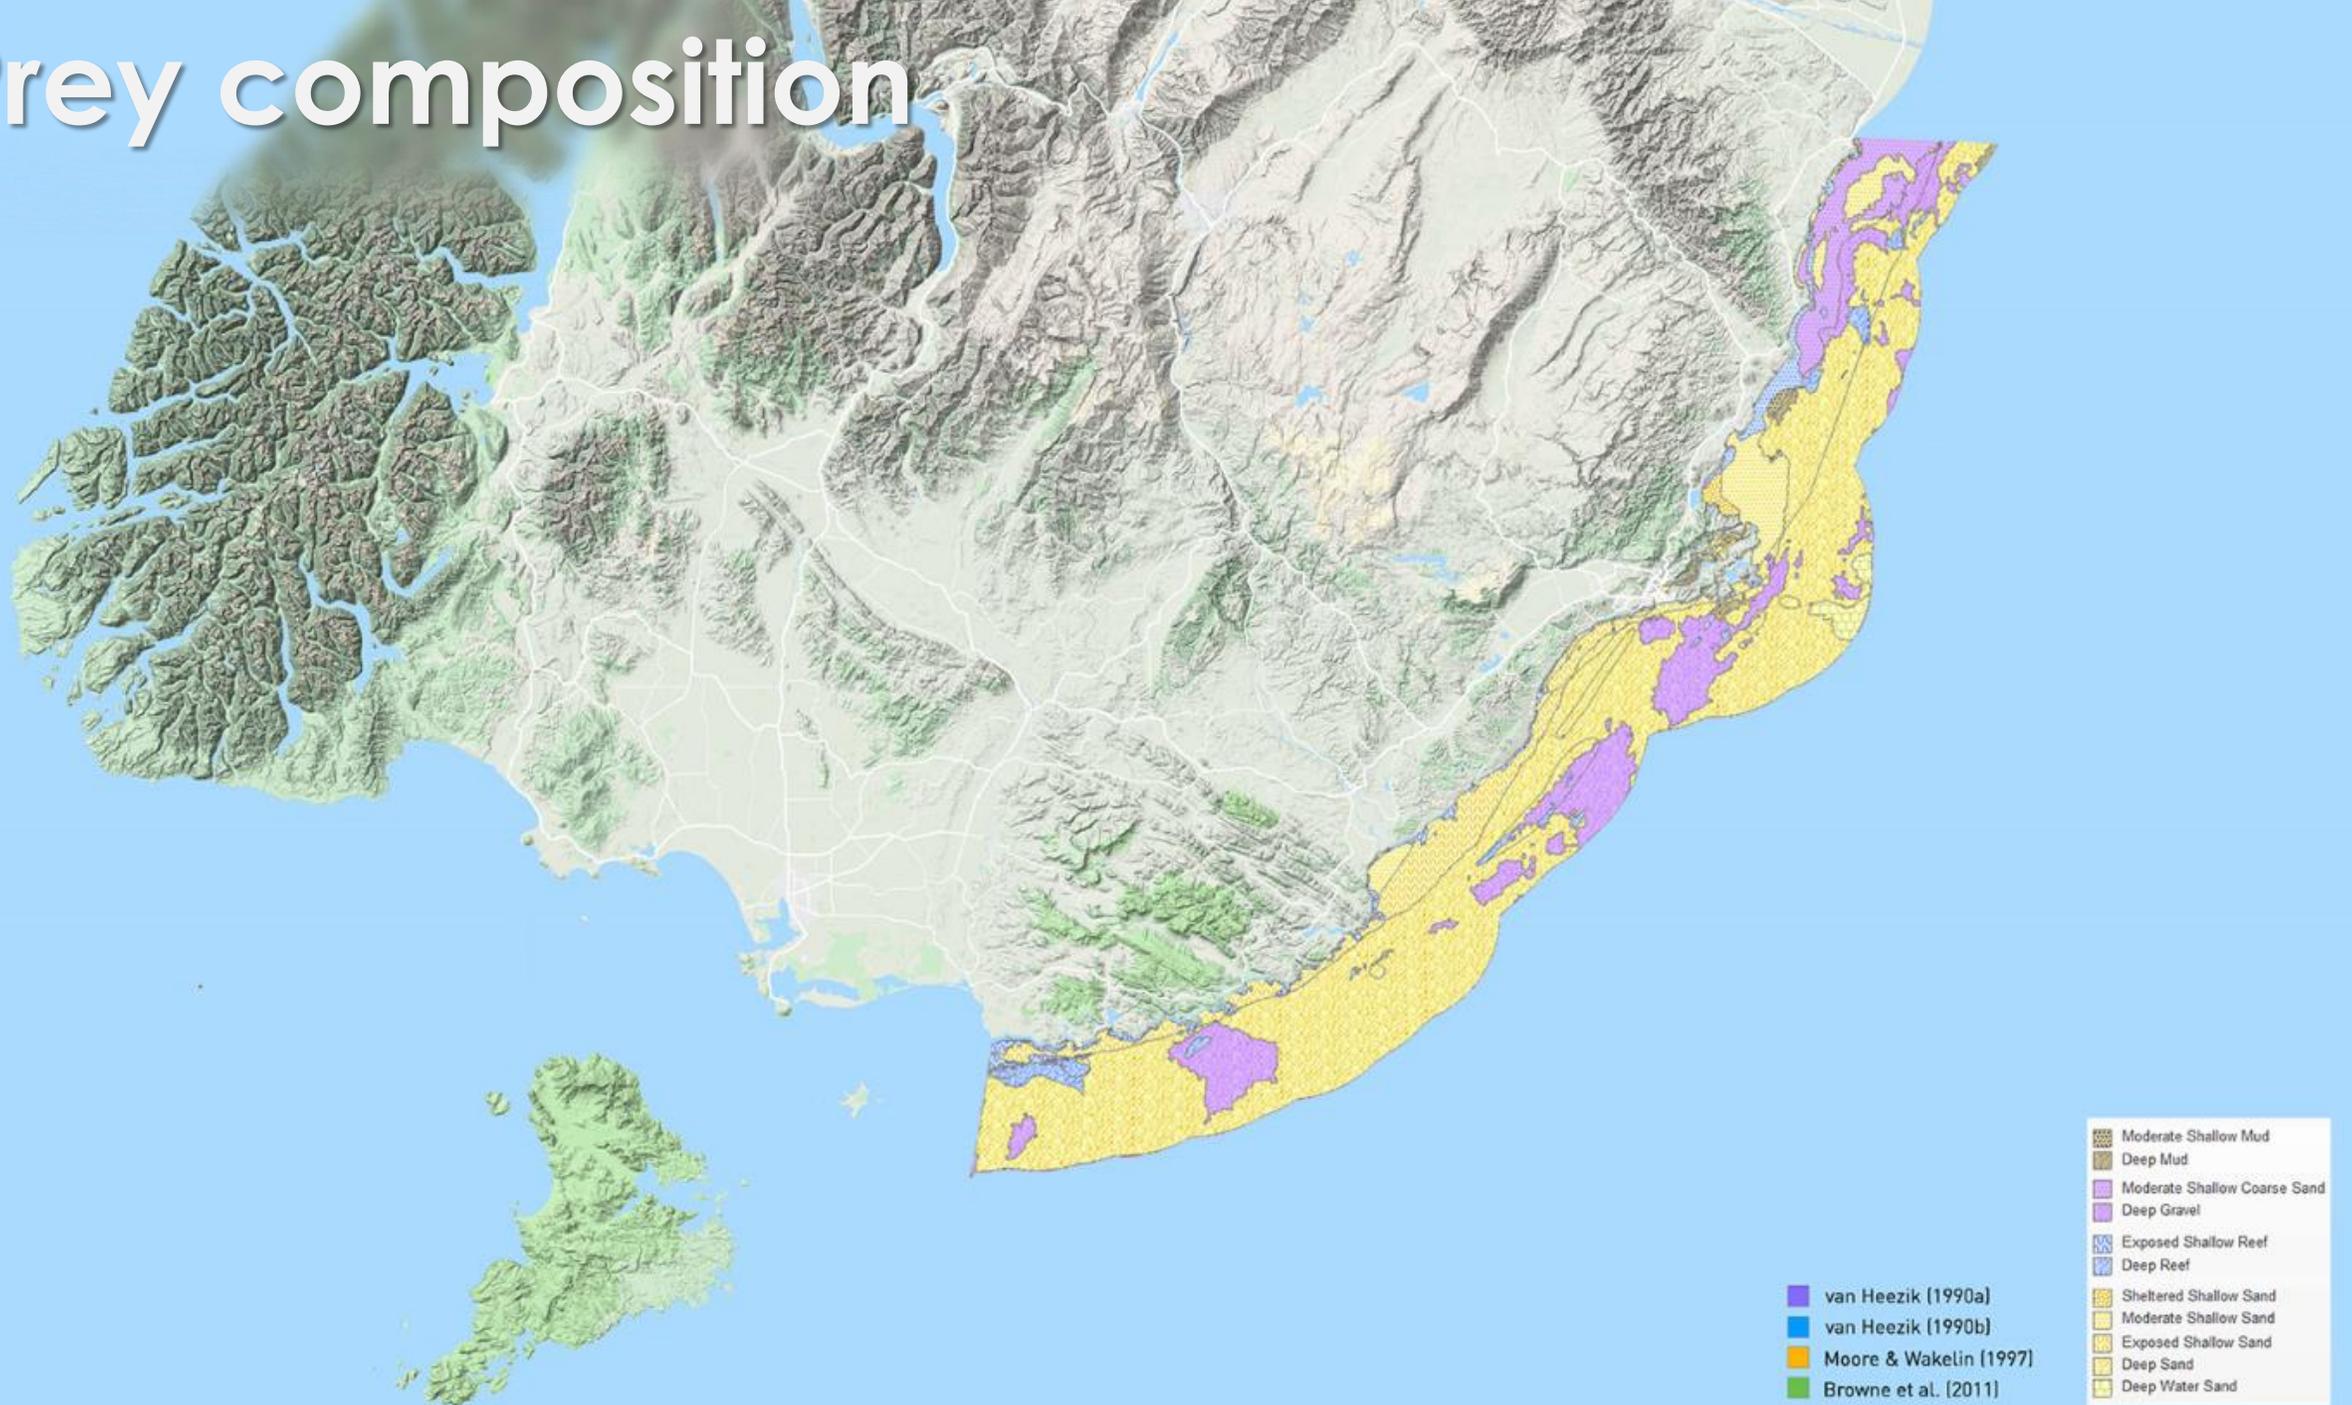

Blue cod capture

Opalfish capture

Jellyfish harvesting

Prey sizes

too big to
swallow
for chicks

Recommendations

1. Foraging monitoring programme
2. Non-invasive diet monitoring (i.e. faecal DNA, cameras)
3. Stable isotope screening programme & database (blood & feathers)
4. Catch up on YEP foraging ecology & diet in sub-Antarctic populations
