### DOC Weldable bands:

These locally-manufactured bands are injection-moulded and have extra material along the split that is melted to form a join using a small battery-operated [soldering iron](#).

The 3.75 mm bands were specifically designed and tested for use on hihi, and 3.1 mm (6 mm height) bands for robins. Requests for use on similar species will be considered.

We also have DOC weldable bands with a slot for an RFID tag (transponder).

### NOTE:

When ordering colour bands, please provide the following additional information:

- FALCON Project name
- Species
- Locality of intended use
- Colour banding schema:
  - number of colours used
  - cohort marking
  - number of bands per leg
  - used and proposed combinations

The Banding Office coordinates colour banding – you may be restricted from using certain colour combinations if these have been used by another project on the same species within a given timeframe or region that may overlap with your proposed colour combinations.
